Information for Authors

Toxicology and Applied Pharmacology publishes original scientific research pertaining to action on tissue structure or function resulting from administration of chemicals, drugs, or natural products to animals or humans. Manuscripts should address mechanistic approaches to physiological, biochemical, cellular, or molecular understanding of toxicologic/pathologic lesions and to methods used to describe these responses. Papers dealing with alternatives to the use of experimental animals are encouraged.

A limited number of short reviews on subjects of timely interest to toxicologists will be considered. Communications, Announcements, and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript handling fee. The Society of Toxicology has established that a manuscript handling fee of $50.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In the event that this fee cannot be met by the authors or their institution, an explanatory letter must be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the handling fee.

Submission of manuscripts. All manuscripts should be submitted to: ***Toxicology and Applied Pharmacology*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.**

Form of manuscript. Manuscripts should be submitted in quadruplicate (one original and three photocopies), in English, including four sets of figures. All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Papers in French or German can be considered for publication: authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides. Dot matrix printers should not be used.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces) and the name, telephone number, and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to *Toxicology and Applied Pharmacology*; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Example: Immunoperoxidase Localization of T-2 Toxin. Lee, S. C., Beery, J. T., and Chu, F. S. (1984). *Toxicol. Appl. Pharmacol.* **72,** 228–235.

Format. The following text sections should be used.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given. Details regarding animal housing conditions should be given.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author's name followed by *et al.* All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index,* 1985. Note the following styles for references.

GERHART, J. M., TILSON, H. A., HONG, J. S., AND UPHOUSE, L. L. (1983). Chlordecone-induced tremor: Quantification and pharmacological analysis. *Toxicol. Appl. Pharmacol.* **66,** 234–243.

RANDALL, C. (1977). Teratogenic effects of *in utero* ethanol exposure. In *Alcohol and Opiates* (K. Blum, Ed.), pp. 91–107. Academic Press, New York.

COLE, R. J., AND COX, R. H. (1981). *Handbook of Toxic Fungal Metabolites.* Academic Press, New York.

AGENCY FOR TOXIC SUBSTANCES AND DISEASE REGISTRY

The Agency for Toxic Substances and Disease Registry (ATSDR) is part of the U. S. Public Health Service and is located in Atlanta, Georgia. The Agency's mission is to prevent or mitigate adverse human health effects and diminished quality of life resulting from exposure to hazardous substances in the environment.

ATSDR offers employees a unique opportunity to affect environmental health issues. The Agency is recruiting qualified people at all levels in the following disciplines: Toxicologists, Environmental Health Scientists, Medical Officers, Epidemiologists, Chemists, Environmental Engineers.

Send resume or curriculum vitae to:

Agency for Toxic Substances and Disease Registry
Attention:
Recruitment, 03J
1600 Clifton Road, N. E.
Mailstop E28
Atlanta, Georgia 30333

ATSDR is an Equal Opportunity Employer and provides a smoke-free work environment.

Laboratory References

Clinical Biochemistry of Domestic Animals
Fourth Edition

edited by
Jiro J. Kaneko

In a single volume, this book brings together significant and pertinent information on the biochemistry of disease in animals. Its emphasis is on the rationales and interpretation of the various blood chemical tests and function tests used to evaluate the disease or non-disease state. This fourth edition has been completely updated and includes new chapters on normality in clinical biochemistry, DNA technology, vitamins, trace minerals, leukocyte function, and laboratory rodents. As such, it is an indispensable teaching, learning, and application resource for all persons engaged in the care, health, welfare, and research of animals.

March 1989, 936 pages, $105.00
ISBN: 0-12-396304-4

An accessible thorough guidebook...

Laboratory Animal Anaesthesia
An Introduction for Research Workers and Technicians

P.A. Flecknell

This handbook provides complete information on anaesthesia for research workers and animal technicians, and concentrates on those areas that are of greatest practical importance when anaesthetizing laboratory animals.

1988, 156 pages, $29.95
ISBN: 0-12-260360-5

Laboratory Animal Medicine

edited by
James G. Fox, Bennett J. Cohen, and Franklin M. Loew

1984, 750 pages, $65.00
ISBN: 0-12-263620-1

Methods of Animal Experimentation
Volume VII

Parts A–C

edited by
William I. Gay and James E. Heavner

NEW

Part C

Research Surgery and Care of the Research Animal

Surgical Approaches to the Organ Systems

This volume will complete the series on research surgery and care of the research animal within **Methods of Animal Experimentation**. Surgical use and postoperative care of research animals are quite controversial. New federal legislative guidelines enacted in 1986 require labs and researchers to follow very specific protocols. This three-part series covers all aspects of animal surgery. Part C specifically covers the skin, eye, teeth, the endocrine system, and the immune system.

October 1989, c. 230 pages
$75.00 (tentative)/ISBN: 0-12-278009-4

Part B

Surgical Approaches to the Organ Systems
1986, 258 pages, $75.00
ISBN: 0-12-278008-6

Part A

Patient Care, Vascular Access, and Telemetry
1986, 272 pages, $65.00
ISBN: 0-12-278007-8

Set price for Volumes VII, Parts A–C: $182.75

Veterinary Virology

Frank Fenner, Peter A. Bachmann, E. Paul J. Gibbs, Frederick A. Murphy, Michael J. Studdert, and David O. White

"The text of choice for veterinary virology courses...The book also is a concise reference for veterinarians and all interested in viruses that affect domestic animals."
—CORNELL VETERINARIAN

1987, 660 pages, $59.00
ISBN: 0-12-253055-1

Laboratory Hamsters

edited by
G.L. Van Hoosier, Jr., and Charles W. McPherson

Laboratory Hamsters is an authoritative reference work that will be of interest to the general scientific community, including investigators using or considering the use of hamsters in research, veterinarians, and to students of veterinary medicine.

1987, 400 pages, $79.50
ISBN: 0-12-714165-0

Rabbit Feeding and Nutrition

Peter R. Cheeke

"This book is an excellent treatise on rabbit feeding and nutrition. Anyone with a serious interest in the rabbit must have a copy on their book shelf as a reference source."
—B.T. MEDICAL NURSING AND VETERINARY PUBLISHERS

1987, 376 pages, $47.50
ISBN: 0-12-170605-2
